

# UNIVERSITÀ DEGLI STUDI DI PALERMO

DEPARTMENT	Biomedicina, Neuroscienze e Diagnostica avanzata		
ACADEMIC YEAR	2016/2017		
MASTER'S DEGREE (MSC)	MEDICINE AND SURGERY		
INTEGRATED COURSE	PATHOLOGICAL ANATOMY - INTEGRATED COURSE		
CODE	09747		
MODULES	Yes		
NUMBER OF MODULES	2		
SCIENTIFIC SECTOR(S)	MED/08		
HEAD PROFESSOR(S)	CABIBI DANIELA FLORENA ADA MARIA TRIPODO CLAUDIO	Professore Ordinario Professore Ordinario Professore Ordinario	Univ. di PALERMO Univ. di PALERMO Univ. di PALERMO
OTHER PROFESSOR(S)	CABIBI DANIELA FLORENA ADA MARIA RODOLICO VITO MARTORANA ANNA TRIPODO CLAUDIO	Professore Ordinario Professore Ordinario Professore Associato Ricercatore Professore Ordinario	Univ. di PALERMO Univ. di PALERMO Univ. di PALERMO Univ. di PALERMO Univ. di PALERMO
CREDITS	12		
PROPAEDEUTICAL SUBJECTS	13246 - SYSTEMATIC PATHOLOGY I - INTEGRATED COURSE 13248 - SYSTEMATIC PATHOLOGY II - INTEGRATED COURSE 13257 - SYSTEMATIC PATHOLOGY IV - INTEGRATED COURSE 13253 - SYSTEMATIC PATHOLOGY III - INTEGRATED COURSE		
MUTUALIZATION			
YEAR	5		
TERM (SEMESTER)	2° semester		
ATTENDANCE	Mandatory		
EVALUATION	Out of 30		
TEACHER OFFICE HOURS	<p><b>CABIBI DANIELA</b> Monday 14:00 15:00 Dipartimento PROMISE, Sez. Anatomia Patologica , 1 piano, Via del vespro 129</p> <p><b>FLORENA ADA MARIA</b> Monday 9:00 11:00 Anatomia Patologica 1° piano Wednesday 9:00 11:00 Anatomia Patologica 1° piano</p> <p><b>MARTORANA ANNA</b> Monday 12:00 13:00 1 piano, Istituto di Anatomia Patologica, AUOP Giaccone, Palermo Wednesday 13:00 14:00 Edificio n 11, CEFPAS, Caltanissetta.</p> <p><b>RODOLICO VITO</b> Tuesday 09:00 10:00 Campus Policlinico Universitario A.O.U.P. Via Del Vespro, 131 - Servizio di Anatomia Patologica, Edificio 9B, I piano. Per giorni e/o orari differenti, contattare il docente tramite email vito.rodolico@community.unipa.it</p> <p><b>TRIPODO CLAUDIO</b> Monday 10:00 14:00 Anatomia Patologica, Policlinico Universitario Paolo Giaccone, Piano Primo. Friday 13:00 14:00 CEFPAS, Edificio 11, Caltanissetta (Sede delle lezioni frontali di Anatomia Patologica).</p>		

**DOCENTE:** Prof. CLAUDIO TRIPODO- Sede HYPATIA

<b>PREREQUISITES</b>	Propedeutical subjects: all subjects of the first three years.
<b>LEARNING OUTCOMES</b>	<p>Learning outcomes:            Knowledge of the main pathological pictures, and the relative cell, tissue and organ lesions along with their development with reference to the most significant diseases; Comprehension of the role played by the pathologist in the clinical diagnostic process and patient management; Ability to integrate the acquired knowledge to a critical approach to diagnosis and therapeutic strategies, proving to be able to make personal judgments to solve analytical problems, develop a research-oriented attitude and be able to independently research scientific information; Ability to critically analyse and interpret the histopathological report facilitating understanding to patients.</p>
<b>ASSESSMENT METHODS</b>	Evaluation method: oral test. Evaluation score out of 30.
<b>TEACHING METHODS</b>	Frontal teaching, laboratory practice (including surgical specimen sampling and autoptic investigation), microscopy.

**DOCENTE:** Prof.ssa ADA MARIA FLORENA- Sede CHIRONE

<b>PREREQUISITES</b>	PROPAEDEUTICAL SUBJECTS All subjects of the first three years

**EDUCATIONAL OBJECTIVES OF THE MODULE**

- Know the basic concepts of both the pathogenetic mechanisms of morphological substrate, defined as alterations of organs, tissues, cells and sub-cellular structures, main pathological pictures to understand the clinical correlates (anatomical and clinical correlations).

- Knowing the fundamental role of Anatomical Pathology within the clinical decision-making from which springs the cooperation between clinician and pathologist.

Precipui tasks of discipline are:

- Make a diagnosis about the nature of the disease process

- Assess the stage of development of the disease process, defining prognostic parameters, ie the odds' evolutionary lesion

- Direct the therapeutic choices based on the stage of disease, based on parameters predictive of response to specific treatments. Prerequisite for obtaining this training objective is the ability to interpretate the pathologic reports (cytological, histological, molecular biology).

- Know the indications and limitations of some of the pathological examination methods (intraoperative extemporaneous examination; exfoliative cytology, for affixing needle aspiration and fine needle, needle biopsies) as well as diagnostic implications concerning endoscopic biopsies, surgical biopsies, the surgical specimens for staging, the diagnostic examination necropsy: in most cases is sufficient to pathologist observation under the optical microscope, of cytological smears or routinely stained histological sections, to make the diagnosis; in a

significant number of cases instead is necessary a supplement to the routine colorations with other diagnostic methods such as special stains, immunohistochemistry and other molecular techniques, electron microscopy and molecular biology techniques.

- Understand the relationship between morphology and clinical as well as the impact that the main disease can have in the various districts of the organism in order to obtained a summary of anatomical clinical as a whole. Prerequisite for this training objective is the frequency of autopsy room to attend to some diagnostic necropsy findings. The necropsy diagnostic examination also provides students with the knowledge of how complex and can be, especially with the advance of the age, pathological profile of the patient.

N.B. Given the division in two-semester of the Integrated Course and being the teachers (Prof. Vito Franco, Prof. Vito Rodolico) pertaining to the same SSD (MED / 08), the schedule of lessons each teacher is distributed in both semesters.

**SYLLABUS**

Hrs	Frontal teaching
8	1.Anatomia Patologica Generale: Aspetti morfologici dell'adattamento e del danno cellulare Quadri morfologici delle alterazioni degenerative Aspetti morfologici delle alterazioni trombo-emboliche Caratteristiche cito-istologiche delle flogosi acute e croniche e degli esiti Quadri morfologici delle flogosi croniche granulomatose Basi morfologiche della displasia e delle lesioni precancerose Basi anatomiche dell'oncogenesi e della progressione tumorale Caratteristiche cito-istologiche delle neoplasie Basi anatomo-cliniche delle metastasi Diagnosi delle micrometastasi: ruolo del linfonodo sentinella Principi di stadiazione dei tumori

**EDUCATIONAL OBJECTIVES OF THE MODULE**

Basic concepts of the pathogenetic mechanisms and morphological aspects, defined as alterations of organs, tissues, cells and sub-cellular structures. Main pathological pictures needed to understand the clinical-pathological correlations and diagnosis of various diseases - Assess the stage of development of the disease process, defining prognostic parameters and evolutionary lesion - Direct the therapeutic choices based on the stage of disease, based on parameters predictive of response to specific treatments. how to interpretate the pathologic reports (cytological, histological, molecular biology). - the indications and limitations of some of the pathological examination methods (intraoperative frozen section examinations; exfoliative cytology, for affixing needle aspiration and fine needle, needle biopsies) as well as diagnostic implications concerning endoscopic biopsies, surgical biopsies, the surgical specimens for staging, the diagnostic examination necropsy. Use of ancillary studies (special stains, immunohistochemistry and other molecular techniques, electron microscopy and molecular biology techniques) to perform diagnosis - Understand the relationship between morphology and clinical as well as the impact that the main disease can have in the various districts of the organism in order to obtained a summary of anatomical clinical as a whole. Prerequisite for this training objective is the frequency of autopsy room to attend to some diagnostic necropsy findings. The necropsy diagnostic examination also provides students with the knowledge of how complex and can be, especially with the advance of the age, pathological profile of the patient. N.B. Given the division in two-semester of the Integrated Course and being the teachers (Prof. Vito Franco, Prof. Vito Rodolico) pertaining to the same SSD (MED / 08), the schedule of lessons each teacher is distributed in both semesters.

**SYLLABUS**

Hrs	Frontal teaching
10	1.General Pathology: 10 hours Cell injury and adaptations (2 hours) Thromboembolism (1 hour) Inflammation and Repair (90 minutes) Granulomatous inflammations (30 minutes) Displasia and precancerous lesions (30 minutes) Carcinogenesis and tumor progression (40 minutes) Morphological features of neoplasia (40 minutes) Metastases (20 minutes) Diagnosis of micrometastases: role of the "Sentinel Lymphnode" (20 minutes) Tumor staging (30 minutes) Aims and methods of autopsy (2 hours)
5	1.Diagnostic methodologies and techniques: 5 hours The histological exam form (30 minutes) Different types of biopsy (1 hour) Collaboration between the clinician and the pathologist (20 minutes) Tissue staining techniques (30 minutes) Immunohistochemistry (40 minutes) Molecular biology applied to pathology (30 minutes) Molecular biology and tumor targeted therapy (30 minutes) Brush, squash and fine-needle aspiration cytology (???) Intraoperative examination: aims, methodology and limits (30 minutes)
8	4.Urinary system: 8 hours Congenital anomalies of the urinary system: natural history and morphological patterns (30 minutes) Diseases affecting tubules and interstitium: tubulointerstitial nephritis, acute tubular injury and drug-induced interstitial nephritis (1 hour) Glomerular diseases and diagnostic role of renal biopsy (1 hour) Morphologic features, immunopathology and classification of glomerular diseases (1 hour) Kidney tumors: classification and stadiation (90 minutes) Embryonal kidney tumors (1 hours) Bladder and urinary tract non-neoplastic disease (30 minutes) Bladder malignant neoplasm: stadiation and role of cytology and biopsy (90 minutes)

14	<p>6.Female genital system and breast: 14 hours</p> <p>Vulvitis, vaginitis and cervicitis</p> <p>Cervical intraepithelial neoplasia (CIN) and cytologic features (pap test) (2 hours)</p> <p>Neoplasia of the cervix (eso- and endocervix) (1 hour)</p> <p>Endometritis (1 hour)</p> <p>Endometriosis (30 minutes)</p> <p>Endocervical and endometrial polyps (30 minutes)</p> <p>Endometrial carcinoma (1 hour)</p> <p>Non-epithelial tumors of the uterus (1 hour)</p> <p>Tumors of the ovary: classification, natural history and morphological patterns (2 hours)</p> <p>Placental diseases: hydatidiform mole and choriocarcinoma (1 hour)</p> <p>Non-neoplastic diseases of the breast: diagnostic algorithm of the mammary nodule and FNA biopsy (90 minutes)</p>
12	<p>3.Hematopoietic and lymphoid system: 12 hours</p> <p>Lymphadenomegaly: etiology and pathogenesis, role of nodal biopsy (1 hour)</p> <p>Diagnostic role of bone marrow biopsy (30 minutes)</p> <p>Neoplastic disease of the hematopoietic and lymphoid system (30 minutes)</p> <p>Lymphoid neoplastic proliferations: prognosis, therapy, immunologic and molecular features (3 hours)</p> <p>Myeloid neoplastic proliferations: prognostic and diagnostic markers (2 hours)</p> <p>-----</p> <p>-----</p> <p>Monoclonal gammopathy and progression to multiple myeloma (30 minutes)</p> <p>Anemia: secondary organ damage (20 minutes)</p> <p>Thymus neoplasms (20 minutes)</p> <p>Splenomegaly (20 minutes)</p>
