<b>PREREQUISITES</b>	knowledge of molecular structure of drugs. knowledge of approaches to the synthesis and characterization of molecules.
<b>LEARNING OUTCOMES</b>	Knowledge and understanding - Knowledge of useful methods and instrumentations to synthesize compounds of pharmaceutical interest. Ability to understand problems and suggest solutions for the processes involved. Applying knowledge and understanding - Ability to find and utilize new technologies also with the aid of suitable databases. Making judgements - Ability to evaluate the obtained results and to plane new strategies on the base of what has learnt during the course Communication - Ability to explain and discuss the results of study devoted to the synthesis and purification of new molecule of biological interest. Learning skills - Ability to utilize the acquired knowledge to the field of drug synthesis.
<b>ASSESSMENT METHODS</b>	The student must answer at least three/four questions covering all aspect of the program. The oral examination tends to evaluate whether the student has developed knowledge, understanding and the ability to integrate the topics within the program. The threshold of sufficiency will be achieved if the student shows knowledge and understanding of the topics at least in general terms with sufficient communicative skills. Below this threshold the exam will be unsatisfactory and student will not pass it. On the contrary, the more the student will interact with the examining board with better expositive skill and deeper knowledge, the more the evaluation will be positive. The assessment is carried out of thirty.
<b>EDUCATIONAL OBJECTIVES</b>	The students should acquire all the suitable knowledge to successfully carry on the synthesis of compounds of pharmaceutical interest.
<b>TEACHING METHODS</b>	lectures
