DOCENTE: Prof. ANTONINO BIANCO

PREREQUISITES	All students interested to this course must know as prerequisite the fundamentals of training periodization in sports, applied human anatomy and physiology with particular focus on on musculoskeletal system. Fundamentals of posture and biomechanics. Fundamentals of resistance training.
LEARNING OUTCOMES	Knowledge of fundamental of fitness. Comprehension of basic principles of training periodization and training programming in the field of traditional fitness and group fitness field, respectively. Ability to assess, plan and evaluate fitness programs regarding general population. Ability to work in team environment and also with different professionals coming from other related disciplines.
ASSESSMENT METHODS	<p>The exam is an oral exam aimed at verifying the competences and skills to be acquired at the end of the course. The purpose of the questions is to verify knowledge of contents to be acquired at the end of the course, as well as analytical and expository skills. Knowledge check includes scrutiny of the capability to establish relationships between contents, theories, patterns and methodologies which have been an object of study during the course. As far as analytical skills are concerned, check will aim at verifying at least one of the following goals: -S/he can give judgements and opinions about the disciplinary contents -S/he can understand applications and/or implications of the disciplinary contents within the specific discipline of reference -S/he can set the disciplinary contents within the professional, technological and sociocultural setting of reference. The student will have to answer at least two/three questions in the oral form about aspects of the syllabus with reference to the suggested textbooks. The exam aims at verifying knowledge and understanding of topics, interpretative competence and autonomy of judgement of concrete cases. The passing grade threshold will be considered reached if the student shows to have acquired the topics of the specific subject matter and is able to solve specific concrete cases as well as to correctly convey knowledge with satisfactory expository skills. Below the above-mentioned threshold, the exam will be considered unsatisfactory. The more the student can interact with his/her examiner showing mastery of language, of the specific subject matter and ability to convey his/her knowledge of the topics of the specific field of reference, the more the assessment will be positive. The latter will be expressed by 18 to 30-30 with honours marks. A face to face interview will be provided to the students. A number of 3-4 questions will be administered according to the course topic and the learning outcomes. The assessment has a final grade included in the following range: 30-30 with honours (excellent), corresponding to 'excellent knowledge of topics, excellent use of language, good analytical skills, the student can implement his/her knowledge to solve the submitted issues'; 26-29 (very good), 'good mastery of topics, very good use of language, the student can implement his/her knowledge in order to solve the submitted issues'; 24-25 (good), corresponding to 'basic knowledge of the main topics, fair use of language, with moderate capability to independently implement knowledge to solve the submitted issues'; 21-23 (satisfactory), 's/he doesn't possess full mastery of the main teaching topics but s/he possesses knowledge of them, satisfactory use of language, poor capability to independently implement the acquired knowledge'; 18-20 (passing grade), 'very poor basic knowledge of both the main teaching topics and the technical language, no or very poor capability to independently implement the acquired knowledge'; unsatisfactory, 's/he doesn't possess an acceptable knowledge of the contents of the topics dealt with during the course'.</p>
TEACHING METHODS	The course provide lectures, practical sessions and case studies. The course will include also work experience at gym.

MODULE
APPLIED HUMAN ANATOMY FOR SPORT PERFORMANCE

Prof. FRANCESCO CAPPELLO

SUGGESTED BIBLIOGRAPHY

AMBIT	21001-Attività formative affini o integrative
INDIVIDUAL STUDY (Hrs)	55
COURSE ACTIVITY (Hrs)	20

EDUCATIONAL OBJECTIVES OF THE MODULE

At the end of the course I'm expecting students able to work within gyms as fitness coaches and personal trainers. They will be able to manage the gyms as technical director or managing directors. The necessary training objective will be to gain knowledge of the anatomical structures applied in the planning and management of fitness activities.

SYLLABUS

Hrs	Frontal teaching
3	Modification of the muscle groups and their relationships with joints and bone segments during the exercises involving the shoulder.
2	Modification of the muscle groups and their relationships with joints and bone segments during the exercises involving the elbow.
3	Modification of the muscle groups and their relationships with joints and bone segments during the exercises involving the wrist and hand.
3	Modification of the muscle groups and their relationships with joints and bone segments during the exercises that involve the spine.
3	Modification of the muscle groups and their relationships with joints and bone segments during the exercises involving the hip.
3	Modification of the muscle groups and their relationships with joints and bone segments during the exercises involving the knee.
3	Modification of the muscle groups and their relationships with joints and bone segments during the exercises involving the foot.
