OTHER PROFESSOR(S)	
CREDITS	6
INDIVIDUAL STUDY (Hrs)	102
COURSE ACTIVITY (Hrs)	48
PROPAEDEUTICAL SUBJECTS	
MUTUALIZATION	
YEAR	1
TERM (SEMESTER)	1° semester
ATTENDANCE	Not mandatory
EVALUATION	Out of 30
TEACHER OFFICE HOURS	SIMON FABRIZIO Monday 09:00 10:00 Studio 8, 3° piano, Dipartimento SEAS

DOCENTE: Prof. FABRIZIO SIMON

PREREQUISITES	Students are required to be familiar with the main economic and political events and the social phenomena of modern and contemporary history, as well as a scholastic knowledge of the cultural paradigms which characterize European intellectual history. Both requisites can be satisfied by studying course books used in high schools.
LEARNING OUTCOMES	<p>Knowledge and understanding The target of the course is the learning of the economic history and the history of economic thought of the modern and contemporary age. The student will be guided in the understanding of both the real facts of economy -events, phenomena, institutions and policies- and their intellectual and theoretical representations in the economic and political literatures of the age. Special attention will be devoted to the evolutive process which determined: the development of modern market economy; the achievement of capitalism; the rise and spread of the industrialization. Consistent with the aim of the SECIM course, lectures will focus on: the international dimension of economy, the dynamics of regional integration; the processes of economic development.</p> <p>Applying knowledge and understanding The student will acquire knowledge and ability to proceed with autonomy in the analysis of complex economic reality by means of the historical method.</p> <p>Making judgements The course aims at developing a critical capacity of judgement on economic historiography in order to spur a personal approach in the interpretation of economic phenomena and study of historical sources.</p> <p>Communication The course will enable the student to learn a specialized language, the mastery of terminology and the ability of exposition in a written dissertation and oral debate.</p> <p>Lifelong learning skills At the end of the course the student will have notions and abilities which permit him to continue a more advanced study of economic and social phenomena, above all in an international setting.</p>
ASSESSMENT METHODS	<p>The assessment consists of a two part written exam (maximum time:one hours): ten multiple choices test; two thematic subjects to deal with choosing among four. The result will be successively discussed with the student. The candidate passes the exam if shows a good knowledge and understanding of the subjects and a sufficient ability of exposition of the matter.</p> <p>Halfway through the course, the students will be able to take an intermediate exam on the first part of the programme, whose structure is the same as the final one.. A pass mark in the intermediate exam will allow the student to keep on studying only the second part of the programme for the final exam. The assessment of the students who attend the lectures takes in consideration the contributions made in the discussions.</p>
EDUCATIONAL OBJECTIVES	The course will provide students with a comprehensive knowledge of the economic history and the history of economic thought of the modern and contemporary age. Particularly attention will be devoted for those historical moments in which events and changes cause great theoretical and political debates which then are able to impress on the institutions and phenomena of economy. Consistent with the aims of the SECIM course, It will deepen the processes of economic growth and of international expansion and projection.
TEACHING METHODS	<p>The course will include 48 hours of classroom lectures. In order to help learning and spur self-judgment, the lectures -which will be supported by several didactic materials- will devote some time to the debate on the themes dealt with. For this purpose, the elaboration of some thematic items will be proposed to the students and these will be read and debated in class. This will permit the students to acquire abilities to apply knowledge and to develop capability of oral communication and written exposition.</p> <p>During the lectures, some multiple choices tests will be given to permit the students to verify their grade of understanding and learning.</p>
