

UNIVERSITÀ DEGLI STUDI DI PALERMO

DEPARTMENT	Biomedicina, Neuroscienze e Diagnostica avanzata			
ACADEMIC YEAR	2019/2020			
BACHELOR'S DEGREE (BSC)	MEDICAL AND IMAGE DIAGNOSTICS AND RADIOTHERAPY TECHNIQUES			
INTEGRATED COURSE	STATISTICS, IMAGE PROCESSING AND FILING, PHYSICS - INTEGRATED COURSE			
CODE	13580	13580		
MODULES	Yes			
NUMBER OF MODULES	3			
SCIENTIFIC SECTOR(S)	MED/01,	ING-IN	=/05, FI	S/07
HEAD PROFESSOR(S)	PERES (GIOVAN	INI	Cultore della Materia Univ. di PALERMO
OTHER PROFESSOR(S)	PERES (VITABILIMATRAN	E SALV	ATORE	Cultore della Materia Univ. di PALERMO Professore Ordinario Univ. di PALERMO A Professore Ordinario Univ. di PALERMO
CREDITS	9			
PROPAEDEUTICAL SUBJECTS				
MUTUALIZATION				
YEAR	1			
TERM (SEMESTER)	1° semes	ter		
ATTENDANCE	Mandato	'n		
EVALUATION	Out of 30			
TEACHER OFFICE HOURS	MATRAN	GA DON	IENICA	
	Friday	12:00	13:30	Stanza della docente, Dipartimento di Promozione della Salute, Materno-Infantile, Medicina interna e specialistica di eccellenza "G. D'Alessandro", Via del Vespro, 133, piano terra
	PERES G	IOVANN	I	
	Monday	15:30	17:30	Specola Universitaria (Dip. Fisica e Chimica) - Piazza Parlamento 1 - Studio del Prof. Peres (Stanza nr. 15)
	Tuesday	15:30	17:30	Specola Universitaria (Dip. Fisica e Chimica) - Piazza Parlamento 1 - Studio del Prof. Peres (Stanza nr. 15)
	VITABILE SALVATORE			
	Monday	16:30	18:30	Piattaforma Microsoft Teams, Dipartimento di Biomedicina, Neuroscienze e Diagnostica avanzata, Plesso di Radiologia – 1° piano, Stanza n. 108.

DOCENTE: Prof. GIOVANNI PERES

DOCENTE: Prof. GIOVANNI PERES	
PREREQUISITES	Basic mathematics; algebraic equations. Logarithms; elements of trigonometry. Cartesian coordinates. Graphical representation.
LEARNING OUTCOMES	Knowledge and understanding. Students will be able to understand the basic concepts underlying the information/communication technologies that act as a support to diagnostic procedures. The working principles of hardware, software and network informatic systems will be exposed, with particular emphasis to Radiology Information Systems (RIS) and Picture Archiving and Communication System (PACS). In this respect, the student will have a general knowledge and understanding of the techinques commonly used for incresing the quality of digital radiological images. Students will also be able to understand the basic concepts of general physics underlying the often very sophisticated instruments used in medical diagnostics and radiotherapy. Examples are the mechanics of point material bodies, fluid mechanics, thermology and basic thermodynamics, as well as basic concepts of electricity, magnetism and electromagnetic fields. Students will also be able to understand the basic principles of statistics and its use in the field of radiology, with particular emphasis on treatment and statistical analysis of data, probability theory, statistical sampling and elements of inferential statistics. Applying knowledge and understanding Students will be able to use simple informatic systems, typically RIS and PACS. They will also acquire specific technical knowledge to perform simple manipulations (e.g. the scale of greys) to improve the quality of radiological images. Students will apply the general physics knowledge to improve their understanding of the physical principles underlying the instruments and physical techniques used in medical school. They will also be able to perform statistical analysis of the data and to interpret the results obtained. Making judgements The student is expected to be able to study and work independently, with particular attention to the interdisciplinary aspects of knowledge Communication skills Ability to communicate with experts in near fields. The student is expected to gain the communication
ASSESSMENT METHODS	Written and/or oral examination. The numerical evaluation of the integrated course will be calculated as the average of the scores obtained by the student in the single moduli. Scores will be ranked as follows: 18-23: sufficient; 24-26:
TEACHING METHODS	good; 27-30: excellent; 30 cum laude: brilliant.
TEACHING METHODS	Lectures, exercises, practical

MODULE GENERAL PHYSICS

INDIVIDUAL STUDY (Hrs)	45
COURSE ACTIVITY (Hrs)	30

EDUCATIONAL OBJECTIVES OF THE MODULE

THIS MODULE PROVIDES STUDENTS WITH FUNDAMENTAL BASIC CONCEPTS OF PHYSICS. TYPICAL TOPICS INCLUDE KINEMATICS, DYNAMICS, ENERGY, OPTICS, ELECTRICITY, ELECTROMAGNETICS, THERMAL PHYSICS AND FLUID MECHANICS. THE MODULE ALSO AIMS AT ENHANCING THE UNDERSTANDING OF APPLIED PHYSICS IN BIOMEDICAL ENVIRONMENT, WHICH SERVES AS THE BASIS FOR APPLIED PHYSICS MODULE.

SYLLABUS

Hrs	Frontal teaching
3	Physical quantities. Scalars and vectors. Dimensional analysis; orders of magnitude. The cortesian coordinates. Kinematics.
3	Dynamics of the material point body. Newton laws. Momentum. Energy; kinetic energy, potential energy. Energy conservation; energy transfer.
4	Fluids dynamics: pressure, Archimede's principle, continuity equation, Bernouilli's theorem. Real fluids; viscosity.
4	Thermology and thermodynamics. temperature and internal energy. Heat exchanges. First and second principles of thermodynamics. Internal energy, entropy, free energy.
4	Electrostatics: electrical forces, Coulomb law, electrical field, electrical potential. Conductors and insulators. Capacity. electrical current and electrical circuits. Kirchoff laws.
5	Magnetism: Lorentz force and the magnetic field. Ampere's theorem. Varying magnetic fields and electromagnetism: Faraday's law of induction. Self induction, mutual induction. Displacement current; Maxwell's equations: propagation of electromagnetic fields.
5	Oscillations; harmonic motion. The concepts of amplitude, frequency and phase. Mechanical waves; electromagnetic waves. Light. Geometrical optics (mention). The microscope. Intefference and diffraction (mention).
Hrs	Practice
2	Introduction to medical Physics. Discussion and solution of simple problems.

MODULE IMAGE PROCESSING AND FILING SYSTEMS

Prof. SALVATORE VITABILE

INDIVIDUAL STUDY (Hrs)	45
COURSE ACTIVITY (Hrs)	30

EDUCATIONAL OBJECTIVES OF THE MODULE

The course aims at providing basic knowledge associated to the Information and Communication Technology, as a useful support for medical imaging. The course offers an introduction to computer systems, analysing the related basic operating principles of its infrastructures: the hardware, the software, and the network infrastructures. Further details will be provided on RIS (Radiology Information System) and PACS (Picture Archiving and Communication System). The course will also introduce the concept of digital image, the impact of spatial and grey level resolution on its quality, and it will present the common used techniques for medical image filtering and quality enhancement.

SYLLABUS

Hrs	Frontal teaching
3	Course introduction; Information representation and processing.
5	Hardware Infrastructure: introduction to computer architetture; central processing unit; memory systems; I/O devices.
3	Software Infrastructure: features and purposes of an operating system; major components of an operating system.
3	Network Infrastructure: data and information transmission; computer networks; a brief introduction to TCP/IP.
2	RIS (Radiology Information System) and PACS (Picture Archiving and Communication System).
2	DICOM and HL7 standards.
3	Digital Images.
3	Digital Image representation.
2	The impact of spatial and grey level resolution on digital image quality.
4	Digital image processing techniques.

MODULE MEDICAL STATISTICS

Prof.ssa DOMENICA MATRANGA

EDUCATIONAL OBJECTIVES OF THE MODULE

COURSE ACTIVITY (Hrs)

The course is aimed to introduce the statistical methodology useful to the skills of the health professional. Students will be introduced to the elementary concepts of descriptive statistics, probability calculation and measurement of accuracy of diagnostic tests.

SYLLABUS

Hrs	Frontal teaching
3	Sources of health data
2	Basic concepts: qualitative and quantitative characters, discrete and continuous characters, scales of measurement: nominal, ordinal, intervals and ratio
2	Data presentation: frequency and quantity distributions. Graphical representations
4	Measures of mean and variability with exercises
4	Elements of probability theory. Bayes Theorem. Measures of accuracy of diagnostic tests. Roc Curves
3	Theoretical distributions: Gauss and Binomial distribution, with exercises
2	Central Limit Theorem. Sample distributions of sample mean, with exercises
2	Statistical estimate of the mean
2	Statistical tests of significance for the mean
Hrs	Practice
2	Practice on the use of health databases
4	Practice on preparation of tables and graphics to describe and summarize data
