PREREQUISITES	Knowledge of anatomy, physiology, biochemistry and general pathological processes of : Abdomen and Digestive System, Liver and biliary tract, Pancreas, Spleen and lymph nodes, Chest and Diaphragm, Breast, Exocrine and Endocrine Glands.																					
LEARNING OUTCOMES	Knowledge and understanding. At the end of the course the student will: - Know the theoretical principles underlying the clinical method and evidencebased medicine of surgical pathologies. - Knowing how to correctly perform a complete clinical history of a surgical patient. - Knowing how to deal with the patient in a variety of environmental conditions both in election and emergency. - Knowing how to perform a correct and complete physical examination of the patient, including both the general and systemic aspects and individual organs and systems. - Being able to approach patients: changes in swallowing, impaired digestion, evacuation disorders, gastrointestinal bleeding, acute abdominal pain, jaundice, - Knowing how to detect and interpret critically the main symptoms and signs, and identify the most correct and appropriate diagnostic clinical and instrumental path. Applying knowledge and understanding. Students will spend the knowledge acquired during the course directly into employment. Making judgments. Students will be able to evaluate in a rational and self-knowledge provided by the course and be able to set an argument based on evidence and information derived from the examination of the patient's body. Learning ability. Ability to continuously updated through the knowledge of the arrangements for consultation and interpretation of information sources (publications scientific data, databases and IT resources).

EDUCATIONAL OBJECTIVES OF THE MODULE

on the basis of the knowledge of anatomy and physiology acquired through the preparatory teachings, we illustrate the principles of anamnestic collection and physical examination in general surgery with particular reference to the pathophysiological principles underlying the signs and symptoms of the main abdominal surgical pathologies. Identify the main indications for surgical intervention both in the elective and in the emergency regime. Through this teaching the student will be able to carry out an initial diagnostic-therapeutic approach to the surgical patient with knowledge of the main general surgery interventions.
