DOCENTE: Prof.ssa CARLA CANNIZZARO- Sede *CHIRONE*

| | |
|---------------------------|--|
| PREREQUISITES | Students will have acquired the basics of Human Physiology, Microbiology, General Pathology, Pathophysiology and Medical Methodology and pathology, Systematic Pathology 1, Systematic Pathology 2 |
| LEARNING OUTCOMES | Knowledge and understanding - Acquisition of the most appropriate means to reach a competent comprehension of the issues and knowledge of the effects of pharmacological properties of the molecules employed in therapy -Acquisition of a proper language, suitable to the description of molecular cellular and systemic activity of the drugs. Ability to retain and apply a methodology to consolidate a critical knowledge of the main categories of pharmacological agents and their direct action on specific organs and systems - Acquisition of a dynamic and "analytical" assessment concerning the fields of pharmacological applications, according to the Guidelines and the scientific Literature. Developing the ability to discuss on the rationale of specific drug therapies with Seniors and also share it with non-expert audience. |
| ASSESSMENT METHODS | The examinee must answer at least three orally questions regarding all object parts of the program, with reference to the recommended texts. Final assessment aims to evaluate whether the student has knowledge and understanding of topics concerning the effects of pharmacological agents. The pass mark (18/30) will be reached when the student showed that he understood the arguments, at least in general lines, and has reached sufficient competence regarding the knowledge of the main categories of pharmacological compounds and their direct action on specific organs and system. . Below this threshold the examination will be considered insufficient. More the examinee is able to better expose the exam topics, more its assessment will be positive until reaching the 30/30 vote with possible praise when in-depth critical knowledge is displayed |
| TEACHING METHODS | Lectures |

| | |
|---------------------------|---|
| PREREQUISITES | Knowledge of chemistry, biochemistry, physiology, microbiology, pathology. Passing the exams of the systematic pathologies. |
| LEARNING OUTCOMES | <p>Knowledge and understanding: Students will gain knowledge in the field of pharmacology including the most recent acquisitions relative to the pharmacodynamics and pharmacokinetics properties of drugs. They have to demonstrate familiarity with the specific terminology of this discipline.</p> <p>Applying knowledge and understanding: The students will be able to apply their pharmacological knowledge in the clinical practice by choosing the correct drug in different clinical contexts taking into account the variability of drug actions in each patient and balancing the costs and benefits of treatments.</p> <p>Making judgements: Students will be capable of obtaining and evaluating the information on drug therapies in the clinical context and take autonomous clinical decisions taking into account also the ethical, social and scientific implications of their actions.</p> <p>Communication skills: Students will acquire the specific pharmacologic terminology so that they can clearly explain any pharmacologic problem to patients and/or colleagues.</p> <p>Learning skills: Students will acquire the ability to obtain new information on pharmacological themes by consulting scientific journals and/or databases on the web or by participating to meetings and courses ad hoc. They will be capable of interpreting critically the results of preclinical or clinical studies and selecting the information that is relevant for the clinical practice.</p> |
| ASSESSMENT METHODS | <p>The examination consists of at least three oral open questions, including one question pertaining the general pharmacology topics and the others focused on specific drug therapeutics. The student have to demonstrate knowledge and understanding of the discipline contents as well as the ability to apply the knowledge gained in the clinical context. An appropriate use of the specific pharmacological terms is also requested. The evaluation will be as following:</p> <ul style="list-style-type: none"> -Excellent (30-30 with laude): Excellent knowledge of teaching contents; students should show high analytical and synthetic capabilities and should be able to apply their knowledge to solve highly complex problems. - Very Good (27-29): Very good knowledge of the teaching contents and excellent language control; students should show analytical and synthetic skills and be able to apply their knowledge to solve problems of medium and, in some cases, even higher complexity. -Good (24-26): Good knowledge of teaching contents and good language control; the students should be able to apply their knowledge to solve problems of medium complexity -Satisfactory (21-23): Average knowledge of the teaching contents, in some cases limited to the main topic; acceptable ability to use the specific discipline language and independently apply the acquired knowledge. - Sufficient (18-20): Minimum teaching content knowledge, often limited to the main topic; modest ability to use the subject specific language and independently apply the acquired knowledge. - Fail: Lack of an acceptable knowledge of the main teaching content knowledge; very little or no ability to use the specific subject language and apply independently the acquired knowledge. |

EDUCATIONAL OBJECTIVES OF THE MODULE

The goal of this course is to understand the composition, properties, and actions of drugs.

SYLLABUS

| Hrs | Frontal teaching |
|-----|--|
| 5 | Pharmacodynamics: molecular mechanisms of drug action |
| 2 | Pharmacology of the sympathetic and parasympathetic nervous system |
| 2 | Agonisti e antagonisti adrenergici. Neurotrasmissione Serotoninergica e Dopaminergica |
| 2 | General anesthetics, local anesthetics |
| 6 | Neurotransmission and the Central Nervous System: drug therapy of depression and anxiety disorders; pharmacotherapy of psychosis and mania |
| 3 | Hypnotics and Sedative, opioids, analgesia, and pain management |
| 5 | Pharmacotherapy of the epilepsies, treatment of central nervous system degenerative disorders; Parkinson, Alzheimer, Multiple Sclerosis |
| 2 | Drug abuse and drug addiction: Cocaine, Amphetamine: Allucinogens, MDMA, LSD Cannabinoids. THC receptors. Pharmacological effects. Clinical uses of synthetic THC analogs |
| 6 | Treatment of Myocardial Ischemia and Hypertension |
| 2 | Pharmacotherapy of Congestive Heart Failure |
| 3 | Anti-Arrhythmic Drugs |
| 2 | Drug therapy for hypercholesterolemia and dyslipidemia |

EDUCATIONAL OBJECTIVES OF THE MODULE

The goal of this course is to understand the composition, properties, and actions of drugs.

SYLLABUS

| Hrs | Frontal teaching |
|-----|--|
| 5 | Pharmacokinetics: the dynamics of drug absorption, distribution, metabolism, and elimination |
| 5 | Pharmacodynamics: molecular mechanisms of drug action |
| 2 | Membrane Transporters and Drug Response |
| 6 | Anti-inflammatory, antipyretic, and analgesic agents |
| 2 | Pulmonary pharmacology |
| 4 | Pharmacotherapy of gastric acidity, peptic ulcers, and gastroesophageal reflux disease |
| 2 | Treatment of disorders of bowel motility and water flux; anti-emetics |
| 3 | The pituitary and the adrenal cortex, thyroid and bone metabolism |
| 2 | Basic principles of antimicrobial chemotherap |
| 4 | Antibacterial agents; Sulfamides, penicillins, cephalosporins, cefamycins, carbapenems, monobactams, glycopeptides |
| 3 | Tetracyclines, aminoglycosides, macrolides, quinolones, Metronidazole, nitrofurantoin, clindamycin |
| 2 | Chemotherapy of tuberculosis, mycobacterium avium complex disease, and leprosy. Antiviral drugs, anticancer drugs |

EDUCATIONAL OBJECTIVES OF THE MODULE

The goal of this course is to understand the properties, and mechanism of actions and adverse effects of the drugs employed in therapy. To stimulate the students to critically and independently evaluate and learn the rationale of the correct employment of the drugs in Therapy according to the latest scientific publications and evidence based updates.

SYLLABUS

| Hrs | Frontal teaching |
|-----|--|
| 4 | neurotransmission and pharmacological targets |
| 2 | General anesthetics, local anesthetics |
| 6 | Central Nervous System: drug therapy of depression anxiety disorders, epilepsy |
| 4 | Opioids, analgesia, and pain management |
| 6 | Pharmacotherapy of neurodegenerative disorders: Parkinson-, Alzheimer-, -s Disease and Multiple Sclerosis |
| 2 | Drug abuse and drug addiction: Cocaine, Amphetamine: Allucinogens, MDMA, LSD Cannabinoids. THC receptors. Pharmacological effects. Clinical uses of synthetic THC analogs |
| 6 | Treatment of Myocardial Ischemia and Hypertension |
| 2 | Pharmacotherapy of Congestive Heart Failure |
| 2 | Anti-Arrhythmic Drugs, |
| 4 | Blood coagulation and anticoagulant, fibrinolytic, and antiplatelet drugs; Antiinfiammatori |
| 2 | Drug therapy for hypercholesterolemia and dyslipidemia. Pharmacotherapy of diabetes |

| COURSE ACTIVITY (Hrs) | 40 |

EDUCATIONAL OBJECTIVES OF THE MODULE

The course (Pharmacology II) provides knowledge in the area of pharmacokinetics that is essential for the appropriate clinical use of drugs in individual patients. It will also address the characteristics of some drug classes including cardiovascular agents, psychoactive and antitumor drugs, and will describe their mechanisms of action at the molecular and cellular level, their pharmacokinetics, the clinical uses, the main source of variability in drug response due to physiopathological and genetic factors, drug interactions and adverse drug reactions.

SYLLABUS

| Hrs | Frontal teaching |
|-----|--|
| 1 | Introduction to pharmacology: drug names and classifications. Pharmacokinetics. Phases of pharmacokinetics (ADME). Plasma- or serum-concentration vs time curve. |
| 2 | Drug absorption. Transfer of drugs across membranes: influence of pH and pKa. Routes of drug administration: oral, rectal, parenteral, transdermal, pulmonary, topical. |
| 2 | Bioavailability. First-pass metabolism. P-glycoprotein. A.U.C. Determination of drug bioavailability. |
| 2 | Drug distribution. Blood flow. Binding to plasma proteins. Blood-tissue barriers. Volume of distribution. Loading dose. |
| 2 | Pathways of drug metabolism. Phase I, II and III of drug metabolism. CYP450. Prodrugs and drug metabolites. Enzyme induction and inhibition. |
| 2 | Drug elimination. Routes of drug excretion: renal, fecal, pulmonary and others. Clearance, half-life. Steady state and drug dosing. Therapeutic drug monitoring. |
| 2 | Drug research and development. Clinical trials of phase I, II, III, IV. Meta-analysis. Pharmacoepidemiology. |
| 4 | Introduction to the pharmacology of the autonomic nervous system. Neurotransmitters and receptors. Muscarinic receptors agonists and antagonists. Anticholinesterase agents. Nicotinic agonists and antagonists. |
| 4 | Adrenergic agonists and antagonists. The treatment of shock. |
| 2 | Antihypertensive drugs. Diuretic agents. |
| 3 | Drugs acting on the renin-angiotensin system. Calcium channel blockers. Vasodilators. |
| 3 | Anti-anginal drugs. Classification and main features of anti-arrhythmic drugs. Digoxin and treatment of heart failure. |
| 3 | Pharmacology of hemostasis. Parenteral and oral anticoagulant agents. Antiplatelet and fibrinolytic drugs. |
| 3 | Actions of drugs in the CNS. Anxiolytic and hypnotic drugs: benzodiazepines and Z compounds. Typical and atypical antipsychotic drugs. |
| 4 | Principles of cancer chemotherapy. Mechanisms of anticancer drug resistance. Main classes of anticancer agents: alkylating agents, topoisomerase inhibitors, antimetabolites, targeted agents, hormonal drugs. |
| 1 | Principles of prescription order writing. Reading of scientific articles regarding pharmacologic subjects. |
