

# UNIVERSITÀ DEGLI STUDI DI PALERMO

<b>DEPARTMENT</b>	Ingegneria
<b>ACADEMIC YEAR</b>	2021/2022
<b>BACHELOR'S DEGREE (BSC)</b>	CIVIL ENGINEERING
<b>SUBJECT</b>	TOPOGRAPHY
<b>TYPE OF EDUCATIONAL ACTIVITY</b>	B
<b>AMBIT</b>	50282-Ingegneria della sicurezza e protezione civile, ambientale e del territorio
<b>CODE</b>	07626
<b>SCIENTIFIC SECTOR(S)</b>	ICAR/06
<b>HEAD PROFESSOR(S)</b>	DARDANELLI GINO      Professore Associato      Univ. di PALERMO
<b>OTHER PROFESSOR(S)</b>	
<b>CREDITS</b>	6
<b>INDIVIDUAL STUDY (Hrs)</b>	98
<b>COURSE ACTIVITY (Hrs)</b>	52
<b>PROPAEDEUTICAL SUBJECTS</b>	19109 - MATHEMATICAL ANALYSIS - INTEGRATED COURSE
<b>MUTUALIZATION</b>	
<b>YEAR</b>	2
<b>TERM (SEMESTER)</b>	2° semester
<b>ATTENDANCE</b>	Not mandatory
<b>EVALUATION</b>	Out of 30
<b>TEACHER OFFICE HOURS</b>	<b>DARDANELLI GINO</b> Monday 10:00 13:00 dicam 2 PIANO EX DIPARTIMENTO DI TRASPORTI

DOCENTE: Prof. GINO DARDANELLI

<b>PREREQUISITES</b>	Knowledge of Mathematics: -Partial and total derivative; systems of equations Knowledge of Physics: -Vectors and arrays, vector components, polar coordinates, electromagnetic waves
<b>LEARNING OUTCOMES</b>	Knowledge and understanding -knowledge of land surveying problems, using topographic and photogrammetric techniques; in particular the students will be able to use theoretical knowledges and methodologies to acquire and elaborate data. They will be able to analyze in a critical way the results obtained to produce cartographic representation of the study areas with GIS method, evaluating and monitoring the time series of displacements of structures, landslides or other. Applying knowledge and understanding -The student will be able to design topographics and photogrammetrics surveying to create maps for the project of a civil or environmental structure and to monitor structures and landslides periodically. Making judgements -The student will be able to analyze and choose the best surveying techniques to create maps (medium and large scale maps), monitoring and evaluating the displacements of civil and environmental engineering structures through the use of available resources Communication skills -The student will be able to talk about problems of topographic and photogrammetric surveying and the topographic and cartographic applications with GIS, identifying any problems related to costs and time. Learning ability -Updating through scientific reviews developed in the geodetic and topographic science. The student should be attend postgraduate specialisation and advanced professional training courses based on the land surveying advanced techniques.
<b>ASSESSMENT METHODS</b>	The final examination consist of an oral exam, based on the contents addressed in the course. The oral examination questions will be open to verify the knowledges and the capabilities of the students about land surveying through techniques and instruments used in geodesy, topography, GPS and photogrammetry. The final assessment will be made on the basis of several conditions related to the level of knowledge about theoretical and practical models to solve topographic problems, according to a correct use of technical language. On the basis of the level of knowledge acquired (from an inadequate to an excellent level) and the technical language to explain the contents of the course, the grades are out of 30. The exam fails if the students don't have a sufficient knowledge of the contents addressed in the course; (rating 18-20/pass): sufficient knowledge of the main contents and sufficient use of technical language; (rating 21-23/satisfactory): knowledge of the main contents and use of technical language, low degree of autonomy in the application of theories to solve engineering problems related to land surveying; (rating 24-25/good): good knowledge of the contents and limited capability to apply several methodologies to solve engineering problems related to land surveying; (rating 26-29/very good): good knowledge of the contents and use of appropriate language, good capability to apply several methodologies to solve engineering problems related to land surveying ; (rating 30-30 e lode/excellent): excellent knowledge of the contents and correct use of language, excellent level of autonomy in the analysis of engineering problems and their solutions.
<b>EDUCATIONAL OBJECTIVES</b>	Acquisition of knowledge about theory and methodology to acquire and elaborate data, to make evaluations about results. Create maps of the study area and analyze the results of time series of the displacements of engineering structures.
<b>TEACHING METHODS</b>	Lectures, classroom exercises and surveying

## SYLLABUS

<b>Hrs</b>	<b>Frontal teaching</b>
1	History of engineering surveying
2	Survey errors
2	Geodesy and reference systems
5	Cartography
4	Topographic instruments and measurements (angle, direction and elevation)
4	Topographic surveying methods (intersections, land surveying problems, triangulations, topographic networks)
4	Global Positioning Systems surveying (GPS, GLONASS)
2	Effect of ground movement on survey control, laser scanning
2	Engineering photogrammetry
2	Geographical Information System, vector and raster model

  

<b>Hrs</b>	<b>Practice</b>
2	Survey errors
6	Cartography
6	Total station surveying
8	GPS surveying
2	Gis open source
