|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>PREREQUISITES</p> | <p>The student will know the biochemistry and physiology of major organ systems that make up the human body and know the pathophysiology of major diseases.</p> |
| <p>LEARNING OUTCOMES</p> | <p>Targets of the Laboratory Medicine Integrated course are to acquire the basic knowledge (theoretical and practical) to critically evaluate the biochemical data at the in relation to human disease.</p> <p>In particular:</p> <ul style="list-style-type: none"> • knowledge of the main laboratory tests and the cellular, molecular and pathophysiological basis which are prerequisites and foundation. • critical interpretation of laboratory tests results with regard to analytical and biological variation; reliability of diagnostic laboratory tests, examples of correct forms of laboratory reports. • basic concepts on the most relevant methodologies used in Clinical Biochemistry and their limitations. • appropriate use of laboratory tests in screening, staging and treatment of the disease. • correct interpretation of laboratory tests results and their critical correlation with molecular and cellular events induced by the disease. • acquisition of a proper programming prescription of tests in relation to the diagnosis or monitoring. <p>Knowledge of the main diagnostic tests used in the laboratory of Clinical Biochemistry and diagnostic significance of reference change values of the main laboratory parameters.</p> <p>Proper ordering for laboratory tests and using of guidelines and flowchart based on "Evidence Based Medicine".</p> <p>Be able to relate to colleagues and health operating in laboratory to understand and synthesize relevant information about all the problems, understanding their content and devising and agreeing on how to study.</p> <p>Perform adequately the request of the most common laboratory tests.</p> <p>Implement self-protection measures in the collection and handling of biological samples.</p> |
| <p>ASSESSMENT METHODS</p> | <p>The learning assessment consists in itinere evaluations and an oral examination. There is a oral test (pre-test) of the Clinical Biochemistry module in preparation for the final oral examination of the Integrated Course. Concerning the clinical pathology module, at the end of the lesson cycle, students will be able to verify their degree of learning by completing a questionnaire with multiple choice answers to clinical pathologies queries. The correct answer number will generate a vote expressed in thirtieth-rating. Students may use the rate awarded when they will face the Laboratory Medicine Integrated Course examination. Oral examination consists in a conversation, order to check competences and subject knowledge required from the course; the evaluation is expressed in thirtieths. The questions will tend to test the learning achieved by assessing a) the knowledge captured; b) the processing capacity, c) possession of adequate exhibition capacity</p> <p>The pass mark will be reached when the student shows knowledge and understanding of the issues at least in general terms, and has minimal application knowledge in order to solve concrete cases; the student will also have presentation skills and of argument as to allow the transmission of his knowledge to the examiner. Below this threshold, the examination will be insufficient. he more the candidate will be able to interact with the examiner with his argumentative and presentation skills, and the more his knowledge and application capabilities will go into detail on the subjects under evaluation, the more the judgment will be positive, according to the following scheme:</p> <ul style="list-style-type: none"> - ECTS grade: A- A+ Excellent- Italian Grade: 30-30 cum laude Eccellente. Grade descriptors: Excellent knowledge of teaching contents; students should show high analytical and synthetic capabilities and should be able to apply their knowledge to solve highly complex problems. - ECTS grade: B Very good – Italian Grade: 27-29 Ottimo. Grade descriptors: Very good knowledge of the teaching contents and excellent language control; students should show analytical and synthetic skills and be able to apply their knowledge to solve problems of medium and, in some cases, even higher complexity. - ECTS grade: C Good – Italian Grade: 24-26 Buono. Grade descriptors: Good knowledge of teaching contents and good language control; the students should be able to apply their knowledge to solve problems of medium complexity. - ECTS grade: D Satisfactory – Italian Grade: 21-23 Discreto. Grade descriptors: Average knowledge of the teaching contents, in some cases limited to the main topics; acceptable ability to use the specific discipline language and independently apply the acquired knowledge. - ECTS grade: E Sufficient – Italian Grade: 18-20 Sufficente. Grade descriptors: Minimum teaching content knowledge, often limited to the main topics; modest ability to use specific language of the disciplines and independently apply the acquired knowledge. - ECTS grade: F Fail – Italian Grade: 1-17 Insufficente. Grade descriptors: Lack of an acceptable knowledge of the main teaching contents knowledge; very little or no ability to use the specific subject language and apply independently the |

| INDIVIDUAL STUDY (Hrs) | 45 |
| COURSE ACTIVITY (Hrs) | 30 |

EDUCATIONAL OBJECTIVES OF THE MODULE

Acquire basic knowledge for the correct choice of the most appropriate analytical techniques for the laboratory diagnosis of infectious diseases and acquire the essential knowledge for critical evaluation and interpretation of the results obtained.

SYLLABUS

| Hrs | Frontal teaching |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3 | Introduction to Clinical Microbiology: discipline tasks, organization of the diagnostic microbiology laboratory, progress towards automation. Methods of sampling, storage, and transport to the laboratory of clinical samples for microbiological examinations. |
| 3 | Skin infections: Main pathogens. Choice of investigations for specific pathologies: piodermite, superficial mycoses, warts, herpetic lesions. Interpretation of results. |
| 3 | CNS infections: Main pathogens. Choice of investigations for specific pathologies: bacterial meningitis, viral meningo-encephalitis, mycoses of the nervous system, tetanus, botulism, prion diseases. Interpretation of results. |
| 3 | Infections of the cardiovascular and lymphatic system: Main pathogens. Choice of investigations for specific pathologies: sepsis and septic shock, endocarditis, myocarditis, pericarditis, acquired immunodeficiency syndrome. Interpretation of results. |
| 3 | Respiratory tract infections: Main pathogens. Choice of investigations for specific pathologies: pharyngitis, laryngitis, pneumonia, tuberculosis, SARS and COVID-19. Interpretation of results. |
| 3 | Infections of the gastrointestinal tract: Main pathogens. Choice of investigations for specific pathologies: peptic ulcer, diarrhea, dysentery, viral hepatitis. Interpretation of results. |
| 3 | Urinary tract infections: Main pathogens. Choice of investigations for specific pathologies: sexually transmitted infections, cystitis. Interpretation of results. |
| 3 | Zoonoses and vector borne infections: Major pathogens. Choice of investigations from individual pathologies: brucellosis, malaria, leishmaniasis, rickettsiosis. Interpretation of results. |
| 3 | Infections of the fetus, infant, childhood and adolescence: Main pathogens. Selection of the investigations indicated by individual pathologies: infections of the TORCH complex, measles, varicella, mumps, infectious mononucleosis. Interpretation of results. |
| 3 | Opportunistic and nosocomial infections: Main pathogens. Selection of the investigations indicated by individual pathologies: aspergillosis, candidiasis, cryptococcosis, toxoplasmosis. Interpretation of results. |

EDUCATIONAL OBJECTIVES OF THE MODULE

Acquisition of basic and applied concepts of clinical biochemistry in order to evaluate methods and clinical applications of laboratory tests critically. Specific aim of the course is to be able to identify the correct tests in relation to clinical conditions of the patients and to be able to understand them in relation to the diagnosis.

Particularly, the students must:

- know the main laboratory tests and the biological, molecular and pathological basis for their use in medicine;
- use laboratory tests in screening, diagnosis, prognosis and therapy of diseases correctly;
- understand laboratory tests results and connect them to the molecular and cellular aspect of the pathologic state
- order laboratory tests appropriately in relation to diagnostic hypothesis or monitoring.

Knowledge of the molecular mechanisms underlying the main clinical syndromes arising from genetic alteration.

SYLLABUS

| Hrs | Frontal teaching |
|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3 | Pre-analytical phase: preparation of the patient, collection of biological samples, processing and identification of biological samples. General laboratory techniques with descriptions of the principles - colorimetry, turbidimetry, nephelometry, fluorimetry, atomic absorption and emission, potentiometric electrochemical techniques, kinetic reactions, electrophoresis, immunoelectrophoresis, immunofixation, immunochemical analysis with monoclonal antibodies, isoelectric focusing, chromatography, radioimmunoassay, count cell, flow cytometry, clinical microscopy, mass spectrometry, HPLC, molecular biology and recombinant DNA technologies, multiple analyzers, magnetic resonance spectroscopy, PET. |
| 2 | Post-analytical phase: data collection, calculation, automatic processing. Analytical variation, analytical error, quality control systems. Intra-individual and inter-individual biological variation, reference values, nomenclature and reporting of laboratory tests. Clinical sensitivity and specificity, predictive laboratory tests. Methodological approaches in clinical biochemistry. The main analytical techniques, automation in clinical biochemistry. |
| 2 | Enzymes: tissue and organ profiles. Acid and alcalin phosphatase, aldolase, aminotrasferase, LDH, gammaGT, cholinesterase, amylase, lipase, protease, G-6-PD, piruvate kinase, lysozyme. |
| 2 | Metabolism of glucose: Diabetes: biochemistry of DMT1 and DMT2; biochemistry of diabetes complications; clinical biochemistry diagnostics (serum glucose, urine glucose, insulin, C-peptide, glucagon, cortisol, GH, glicated proteins and their significance, OGTT, ketone bodies in serum and urine, lactic acid, piruvic acid, dyslipidemia in diabetic patients, urine test in diabetic patients. Hypoglicemia: clinical biochemistry |
| 2 | Metabolism of lipids: Fatty acids, cholesterol, HDL-cholesterol, LDL-cholesterol, tryglicerides, phospholipids. Lipoprotein. Dyslipidemia. Hypercholesterolemia. Atherosclerosis and cardiovascular diseases. Metabolic syndrome. Myocardial infarction: risk factors, biochemical modification in the necrotic area; clinical enzymes, new markers of myocardial infarction. Stroke. Biomarkers in heart failure. Thrombophilia. |
| 2 | Metabolism of proteins: Plasma proteins. Electrophoresis of plasma proteins: interpretation of results. Laboratory evaluation of kidney function. Clinical biochemistry of kidney disease. Urinalysis. Hyperammonemia. Clinical biochemistry of liver failure. Urea metabolism: clinical biochemistry of enzymatic deficiency |
| 2 | Endocrine system: Clinical biochemistry of hypothalamus-pituitary axis: GH and growth, prolactin and amenorrhea, GnRH, LH, FSH and reproduction, ACTH, TSH e functional tests. Clinical biochemistry of endocrine pancreas: insulin and glucagon, somatostatin. |
| 2 | Clinical biochemistry of gastrointestinal hormones. Chronic Inflammatory Bowel Diseases (IBD). Helicobacter pylori infection. Stool examination. Clinical biochemistry of adrenal cortex hyperplasia and hypofunction. Clinical biochemistry of hyperthyroidism, thyreotoxicosis, hypothyroidism. Clinical biochemistry of testis, ovary and sex differentiation. Laboratory tests to monitoring pregnancy |
| 2 | Clinical biochemistry of bone metabolism. Clinical biochemistry of osteoporosis and osteomalacia. Calcium homeostasis. Hormone receptors and their importance in clinical biochemistry. Clinical biochemistry of arterial pressure regulation: ANF, catecholamines, glucocorticoids. Essential hypertension and secondary forms. |
| 1 | Clinical biochemistry of acid base balance. Arterial blood gas (ABG): interpretation and reporting. |

| | |
|---|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2 | Clinical Biochemistry of liver diseases. Clinical Biochemistry of jaundice. Clinical biochemistry of exocrine pancreas. Clinical Biochemistry of heme metabolism Clinical Biochemistry of rheumatic, connective and autoimmune diseases. Laboratory diagnostics of allergic diseases |
| 2 | Cancer diseases: biochemistry of cancer; metastasis, biomarkers.Liquid biopsy. Biochemistry of nutrition and its surveillance. |
| 2 | Laboratory tests in genetic diseases. Laboratory tests in myopathies. Clinical biochemistry of neuro-psychiatric diseases. Biochemistry of pain. Alzheimer's disease and other neurodegenerative dementias. Clinical biochemistry of cerebro-spinal fluid. Biomarkers of cognitive impairment.Clinical biochemistry in shock, trauma and surgery. |
| 2 | Fever of unknown origin. Inflammatory biomarkers. Sepsis biomarkers. Laboratory Exercise Medicine. Preoperative examinations. Laboratory testing in Urgency / emergency. Biobank. HTA in Laboratory Medicine. Laboratory testing drug abuse.The role of laboratory medicine in the COVID-19 pandemic. |
| 2 | Clinical molecular biology: diagnostic techniques used for the diagnosis of the main genetic diseases. Main chromosomal abnormalities revealed by karyotyping. Monogenic diseases and DNA typing. DNA mutations analysis by direct and indirect analyzes (restriction polymorphism). PCR reaction (polymerase chain reaction) for the amplification of abnormal DNA sequences. In vivo clinical biochemistry. |

| INDIVIDUAL STUDY (Hrs) | 45 |
| COURSE ACTIVITY (Hrs) | 30 |

EDUCATIONAL OBJECTIVES OF THE MODULE

Teaching of Clinical Pathology are to allow the students acquire the basic knowledge (theoretical and practical) that allow them to critically evaluate the significance of laboratory data obtained in connection with a pathological condition. The student will acquire the methodological and cultural bases, as well as the experience to know how to decide on the desirability of special tests or analyzes and have the ability to access the analytical data as a particular diagnostic instrument. In 'expected to know the main examinations laboratory and the biological basis, molecular and pathophysiological which are prerequisites and foundation; he who approaches the study of laboratory Medicine should be able to provide a critical interpretation of the analytical results with regard to the uncertainty, measurement and biological variability; must evaluate the diagnostic accuracy of laboratory investigations, then applying the formulas correct reporting. Finally, information is provided on the characteristics and limitations of the most important methods used in Clinical Pathology, the correct use of tests in screening procedures, diagnosis, staging and therapeutic response of the disease..

Verify of knowleges: the oral examination is characterized by three questions about the most important of Clinical Pathology. The 'threshold will be reached if the student shows knowledge and understanding of the topics, at least in general lines and have minimum application expertise on the use of laboratory tests in the 'attività diagnostic and operative of the dental practice; must 'also possess skills' exhibition such as to allow the examiner evaluation. At below this threshold the examination result 'insufficiente. As much is able to interact with the examiner and as much' her knowledge and capacity 'applications goes into detail of the discipline, the more' evaluation will be 'positive. The valuation is thirty and is obviously compared and integrated ponderalmente to that on the assessment of the preparation on the second module of the course. (Pathological anatomy).

| AMBIT | 50401-Patologia generale e molecolare, immunopatologia, fisiopatologia generale, microbiologia e parassitologia |
| INDIVIDUAL STUDY (Hrs) | 45 |
| COURSE ACTIVITY (Hrs) | 30 |

EDUCATIONAL OBJECTIVES OF THE MODULE

The acquisition of knowledge for the choose of laboratory methodology for the diagnosis of infections and interpretation of results.

SYLLABUS

| Hrs | Frontal teaching |
|------------|------------------------------------------------------------------|
| 3 | Principle of microbiological diagnosis. Microbiological sampling |
| 3 | Skin infections |
| 3 | Central nervous system infections |
| 3 | Intravascular infections bacteriemia and sepsis. |
| 3 | Respiratory infections. |
| 3 | Gastrointestinal infections |
| 3 | Urinary tract infection |
| 3 | Zoonosis |
| 3 | Sexually transmitted infections |
| 3 | Nosocomial infection. |
