

# UNIVERSITÀ DEGLI STUDI DI PALERMO

|                                     |  |
|-------------------------------------|--|
| <b>DEPARTMENT</b>                   | Ingegneria   |
| <b>ACADEMIC YEAR</b>                | 2016/2017  |
| <b>BACHELOR'S DEGREE (BSC)</b>      | ELECTRICAL ENGINEERING   |
| <b>SUBJECT</b>                      | PHYSICS 1  |
| <b>TYPE OF EDUCATIONAL ACTIVITY</b> | A  |
| <b>AMBIT</b>                        | 50293-Fisica e chimica   |
| <b>CODE</b>                         | 03295  |
| <b>SCIENTIFIC SECTOR(S)</b>         | FIS/03   |
| <b>HEAD PROFESSOR(S)</b>            | BASILE SALVATORE      Professore Associato      Univ. di PALERMO   |
| <b>OTHER PROFESSOR(S)</b>           |  |
| <b>CREDITS</b>                      | 9  |
| <b>INDIVIDUAL STUDY (Hrs)</b>       | 153  |
| <b>COURSE ACTIVITY (Hrs)</b>        | 72   |
| <b>PROPAEDEUTICAL SUBJECTS</b>      |  |
| <b>MUTUALIZATION</b>                |  |
| <b>YEAR</b>                         | 1  |
| <b>TERM (SEMESTER)</b>              | 1° semester  |
| <b>ATTENDANCE</b>                   | Not mandatory  |
| <b>EVALUATION</b>                   | Out of 30  |
| <b>TEACHER OFFICE HOURS</b>         | <b>BASILE SALVATORE</b><br>Tuesday    15:00    17:00    Viale delle Scienze, Edificio 6 (ex DIN), stanza 213. Nel periodo di non svolgimento di attività didattica in presenza si svolge su piattaforma Teams, previa prenotazione via email.<br><br>Thursday    15:00    17:00    Viale delle Scienze, Edificio 6 (ex DIN), stanza 213. Nel periodo di non svolgimento di attività didattica in presenza si svolge su piattaforma Teams, previa prenotazione via email. |

|                                  |  |
|----------------------------------|--|
| <p><b>PREREQUISITES</b></p>      | <p>High school mathematics. Algebra. 2- and 3-dimensional geometry. Coordinate (Cartesian) geometry. Goniometry and trigonometry.</p>  |
| <p><b>LEARNING OUTCOMES</b></p>  | <p>Knowledge and understanding<br/> Theoretical understanding: have a good understanding of the principles of classical mechanics (logical and mathematical structure, experimental support, and described physical phenomena) and their applications to engineering.<br/> Mathematical skills: be able to understand and master the use of the most commonly used mathematical methods.<br/> Applying knowledge and understanding<br/> Problem solving skills: be able to evaluate clearly the orders of magnitude in situations which are physically different, but show analogies, thus allowing the use of known solutions in new problems. Be able to solve mechanics problems using the dynamics laws and the conservation laws (energy, momentum, angular momentum).<br/> Modelling: be able to identify the essentials of a process / situation and to set up a working model of the same; be able to perform the required approximations.<br/> Making judgements<br/> Be able to identify the more effective way to the solution of mechanics problems using either a dynamics (Newton's laws) and/or a conservation laws approach. Acquire an understanding of how mechanics laws are applicable to many fields, namely engineering.<br/> Communications skills<br/> Be able to describe, analyse and solve mechanics problems using appropriate technical language and be able of written and oral communication on related subjects. Be able to describe the logical flowchart of problem solving. Be able to improve the group working skills.<br/> Learning skills<br/> The student will learn the basic laws of mechanics and the typical methodology of the physical sciences, to be applied to engineering problems, critically and in an autonomous way. He will also improve the ability of autonomous learning.</p>  |
| <p><b>ASSESSMENT METHODS</b></p> | <p>The exam consists of both a written and oral test, evaluated on a 30 points scale. The final mark will take into account the outcome of both tests.<br/> Purpose of the tests: test knowledge of the principles of classical mechanics and their application to solve mechanical problems using the dynamic laws and the conservation laws (energy, momentum, angular momentum). Check the ability of modelling and identifying the essential elements of a problem.<br/> Type of tests: written test (problems and exercises with symbolic or numerical answer, open- or closed-ended); passing the written test (at least 18/30) gives access to the oral exam (discussion of the written test and questions on general topics and / or exercises with reference to the recommended texts). The oral examination must be undertaken in the same exam session ("appello") of the written test.<br/> The written test is a closed book one. Only a calculator and a formula sheet are allowed.<br/> Duration of the written exam: no more than 3 hours.<br/> A mid-term test will be scheduled, aiming at the assessment of the short and medium term time stability of the cognitive process.</p> <p><b>EVALUATION CRITERIA</b></p> <p><b>MARK</b><br/> 28 to 30 - 30 with distinction</p> <p><b>LEARNING OUTCOMES ACHIEVEMENT</b><br/> Learning outcomes have been achieved to a very good/excellent level.<br/> The student demonstrates most or all of the following characteristics.</p> <p><b>KNOWLEDGE AND UNDERSTANDING</b><br/> Full/excellent knowledge, understanding and integration of principles, concepts, methods and techniques of the discipline</p> <p><b>APPLYING KNOWLEDGE AND UNDERSTANDING</b><br/> Extensive/excellent evidence of relevant and perceptive application of theoretical and technical knowledge for tackling and solving problems, with very good/excellent level of autonomy, effectiveness and originality.</p> <p><b>MAKING JUDGMENTS, COMMUNICATION SKILLS, LEARNING SKILLS</b><br/> Comprehensive/excellent evidence of logical, analytical and critical abilities for reaching appropriate judgments and decisions, even based on incomplete or complex information and data.<br/> Full/excellent ability to communicate knowledge, analyses and conclusions, with a very good/excellent level of clearness, fluency and correct use of language.<br/> Very good/excellent abilities of concepts reinterpretation and interdisciplinary</p> |

|                               |   |
|-------------------------------|---|
|                               | <p>connection, showing full evidence for autonomously undertaking further studies or professional activity.</p> <p><b>MARK</b><br/>24 to 27</p> <p><b>LEARNING OUTCOMES ACHIEVEMENT</b><br/>Learning outcomes have been achieved to a good level.<br/>The student demonstrates most or all of the following characteristics</p> <p><b>KNOWLEDGE AND UNDERSTANDING</b><br/>Good knowledge, understanding and integration of principles, concepts, methods and techniques of the discipline, with minor inaccuracies or errors</p> <p><b>APPLYING KNOWLEDGE AND UNDERSTANDING</b><br/>Good evidence of application of theoretical and technical knowledge for tackling and solving problems, with fine/adequate level of autonomy and effectiveness.</p> <p><b>MAKING JUDGMENTS, COMMUNICATION SKILLS, LEARNING SKILLS</b><br/>Good/adequate evidence of logical, analytical and critical abilities for reaching appropriate judgments and decisions, based on available information and data. Good ability to communicate knowledge, analyses and conclusions, with a good level of clearness, fluency and correct use of language.<b>EVALUATION CRITERIA</b><br/>Good/adequate abilities of concepts reinterpretation and interdisciplinary connection, showing evidence for autonomously undertaking further studies or professional activity.</p> <p><b>MARK</b><br/>18 to 23</p> <p><b>LEARNING OUTCOMES ACHIEVEMENT</b><br/>Learning outcomes have been achieved to an acceptable/basic level.<br/>The student demonstrates most or all of the following characteristics</p> <p><b>KNOWLEDGE AND UNDERSTANDING</b><br/>Acceptable/basic knowledge and understanding of principles, concepts, methods and techniques of the discipline, even if with some inaccuracies, errors or omissions</p> <p><b>APPLYING KNOWLEDGE AND UNDERSTANDING</b><br/>Evidence of adequate/basic application of theoretical and technical knowledge for tackling and solving problems, even if with limited level of autonomy and effectiveness.</p> <p><b>MAKING JUDGMENTS, COMMUNICATION SKILLS, LEARNING SKILLS</b><br/>Evidence of some logical, analytical and critical abilities for coherent judgments and decisions attempts.<br/>Basic ability to communicate knowledge, analyses and conclusions, with an acceptable level of clearness, fluency and use of language.<br/>Sufficient abilities, although with some limitations, of concepts reinterpretation and connection in disciplinary contexts, showing some evidence for autonomously undertaking further studies or professional activity.</p> <p><b>MARK</b><br/>below 18</p> <p><b>LEARNING OUTCOMES ACHIEVEMENT</b><br/>Learning outcomes have not been met.<br/>The student demonstrates most or all of the following characteristics</p> <p><b>KNOWLEDGE AND UNDERSTANDING</b><br/>Insufficient knowledge and understanding of principles, concepts, methods and techniques of the discipline, with several and significant errors or omissions</p> <p><b>APPLYING KNOWLEDGE AND UNDERSTANDING</b><br/>Inadequate application of theoretical and technical knowledge for tackling and solving problems.<br/>Poor or no evidence of autonomy and effectiveness in facing the issues.</p> <p><b>MAKING JUDGMENTS, COMMUNICATION SKILLS, LEARNING SKILLS</b><br/>Poor or no evidence of logical, analytical and critical abilities for coherent judgments and decisions attempts.<br/>Insufficient ability to communicate knowledge, analyses and conclusions, with an acceptable level of clearness, fluency and use of language.<br/>Poor abilities of concepts reinterpretation and interdisciplinary connection, showing no evidence for autonomously undertaking further studies or professional activity.</p> |
| <b>EDUCATIONAL OBJECTIVES</b> | Have a good understanding of the principles of classical mechanics. Be able to solve simple problems on mechanics of particles, rigid bodies, fluids, using the   |

|                               |  |
|-------------------------------|--|
|                               | dynamics laws and the conservation laws.   |
| <b>TEACHING METHODS</b>       | Lectures. Instructor-assisted resolution of exercises and problems. Classwork, for single students or groups. Teaching tools: blackboard, chalk sticks, blackboard eraser; computer and video projector.   |

## SYLLABUS

| Hrs | Frontal teaching   |
|-----|--|
| 1   | Measurement and physical quantities. Physics and the scientific method. Measurement of a physical quantity. Fundamental quantities and units. Systems of measurement and dimensional equations. The International System.  |
| 3   | Review of high school mathematics. Differential and integral methods and their application to physics. Geometrical interpretation of derivative and definite integral.   |
| 2   | Vectors and vector algebra. Scalars and vectors. Addition of vectors: geometric and analytical method. Scalar and vector product. Derivative of a vector. Position vector and coordinate systems. Cross product of position vector and a generic vector.   |
| 6   | Kinematics of a particle. Reference system. Position vector as a function of time. Trajectory. Speed and velocity. Rectilinear motion. Velocity and acceleration in rectilinear motion. Motion under constant velocity and constant acceleration. Free fall of bodies. Motion under variable acceleration. Simple harmonic motion. Motion in a plane. Velocity and acceleration in plane. Polar coordinates. Tangential and normal basis. Projectile Motion. uniform circular motion and varied. angular sizes. Relations between the linear and angular sizes. Motion in 3d space. Composition of motions. Kinematics of relative motions. Velocity and acceleration in different reference systems. Coriolis acceleration. |
| 6   | Dynamics of a particle. Interactions and forces. Inertial reference systems. Newton's laws. Mass and weight. Applications of Newton's laws. Friction forces. Elastic forces and Hooke's law. Velocity-dependent forces. Classification of forces. Normal and contact forces. Pivot forces. Impulse and momentum. Dynamics of circular motion. Central forces. The simple harmonic oscillator. Simple pendulum. Torque and angular momentum. Dynamics laws of in a non-inertial reference frame.  |
| 6   | Work and energy. Work of a force. Kinetic energy and its relation with work of a force. Conservative forces fields. Potential energy. Non-conservative forces. Mechanical energy and its conservation. The law of energy conservation. Relationship between force and potential energy. The power. Energy considerations for the simple harmonic motion.   |
| 6   | Dynamics of a system of particles. Center of mass and its Newton's equation. Momentum conservation. Angular momentum and its conservation. Internal forces. Kinetic energy of a system of particles. König's theorems. Parallel forces and the center of gravity. Momentum and angular momentum equations. Collisions. Variable mass systems.  |
| 6   | Dynamics of a rigid body. Degrees of freedom. Kinematics of rigid bodies: translational motion, rotational motion with fixed or variable axis. Moment of inertia. Parallel axis theorem. Equation of motion for rotation of a rigid body. Kinetic energy of rotation. Rolling without slipping motion. Free motion of a rigid body. Compound pendulum. Conservation laws in the motion of a free rigid body. Collisions between particles and rigid bodies and between rigid bodies. Static equilibrium of rigid body.   |
| 3   | Fluids. General information on fluids. Density. Pressure. Fluid statics. Stevin's law and Pascal's law. Barometric equation. Buoyant forces and Archimedes' principle. Ideal and real fluids. Fluid dynamics. Equation of continuity. Volume flux. Bernoulli's theorem and its applications. Laminar flow. Viscosity. Motion in a viscous medium.  |
| 3   | Oscillazioni. Richiami sul moto armonico semplice. Oscillazioni smorzate. Oscillazioni forzate. Risonanza. Analisi di Fourier.   |
| Hrs | Practice   |
| 3   | Algebra vettoriale   |

| <b>Hrs</b> | <b>Practice</b>                   |
|------------|-----------------------------------|
| 3          | Kinematics of a particle          |
| 6          | Dynamics of a particle            |
| 6          | Work and energy                   |
| 6          | Dynamics of a system of particles |
| 6          | Dynamics of a rigid body          |
